Bug Report: Currency Inconsistency in Round Trip Discount Banner

Status	Open
Assignee	QA
Component	Checkout Page / Price Calculation
Version Found	

Severity: Medium (Affects financial display/user trust, doesn't calculate according the currency)

Priority: Medium (Needs fixing before a major deployment; impacts international users)

Description

The discount banner displayed on the Checkout page, which highlights savings for round trip bookings ("Hot deal: Save 16% (€5.90) when you book a round trip!"), seems to be hardcoded to show the Euro symbol (€) and Euro amount, regardless of the currency selected by the user.

This results in a confusing and incorrect display for users who switch to other currencies (e.g., USD, GBP, BRL). The banner appears static, suggesting the discount value and currency are not dynamically updated.

Steps to Reproduce

1. Navigate to the Booking Page.
2. Select a **Round Trip**.
3. Perform a successful search and navigate through the Results Page, selecting both the Outbound and Return trips.
4. Proceed to the **Checkout Page**.
5. Observe the "Hot deal" discount banner. (It should display the correct currency for the current selection).
6. Use the currency selector (or URL parameter) to change the currency to a non-Euro option (e.g., USD - US Dollar).
7. **Actual Result:** The main ticket prices are updated to USD, but the discount banner still reads "Save 16% (**€**5.90)".

Expected Result

The discount banner should dynamically display the correct currency symbol and the corresponding converted discount amount, matching the currency selected by the user for the overall transaction.

Example (If USD is selected): The banner should read: "Hot deal: Save 16% **($**6.35) when you book a round trip!"
